MAGIVOX AI

HTML - A to Z

Semantic HTML | Forms | Accessibility | Media | SEO Basics | Projects | Interview

How to use this guide
Study one topic, type the example yourself, practise without copying, then take the MAGIVOX topic test. After all modules, take the final course exam.

Learning outcomes

- HTML Foundation
- Text Content
- Links and Images
- Semantic Layout
- Tables
- Forms

Table of Contents

1. HTML Foundation
2. Text Content
3. Links and Images
4. Semantic Layout
5. Tables
6. Forms
7. Media
8. Accessibility
9. Metadata and SEO
10. Responsive HTML Practices
11. HTML5 APIs Overview
12. Project
13. Interview Preparation

1. HTML Foundation

What to learn

- DOCTYPE
- html/head/body
- Elements, tags and attributes
- Comments

Practice checkpoint

Explain doctype in your own words. Give one example and one common mistake. Then open the MAGIVOX topic test for this section.

2. Text Content

What to learn

- Headings
- Paragraphs
- strong/em
- Lists
- Blockquote and code

Practice checkpoint

Explain headings in your own words. Give one example and one common mistake. Then open the MAGIVOX topic test for this section.

3. Links and Images

What to learn

- Anchor tag
- Relative vs absolute paths
- img alt text
- figure and figcaption

Practice checkpoint

Explain anchor tag in your own words. Give one example and one common mistake. Then open the MAGIVOX topic test for this section.

4. Semantic Layout

What to learn

- header/nav/main/section/article/aside/footer
- Why semantics help accessibility and SEO

Practice checkpoint

Explain header/nav/main/section/article/aside/footer in your own words. Give one example and one common mistake. Then open the MAGIVOX topic test for this section.

5. Tables

What to learn

- table, thead, tbody
- th and td
- caption
- When not to use tables

Practice checkpoint

Explain table, thead, tbody in your own words. Give one example and one common mistake. Then open the MAGIVOX topic test for this section.

6. Forms

What to learn

- form action/method
- label and input
- select/textarea
- required/min/max/pattern
- button types

Practice checkpoint

Explain form action/method in your own words. Give one example and one common mistake. Then open the MAGIVOX topic test for this section.

7. Media

What to learn

- audio
- video
- source
- iframe basics and safety

Practice checkpoint

Explain audio in your own words. Give one example and one common mistake. Then open the MAGIVOX topic test for this section.

8. Accessibility

What to learn

- Landmarks
- Label controls

- Keyboard focus
- Alt text
- ARIA only when needed

Practice checkpoint

Explain landmarks in your own words. Give one example and one common mistake. Then open the MAGIVOX topic test for this section.

9. Metadata and SEO

What to learn

- title
- meta description
- viewport
- Open Graph idea

Practice checkpoint

Explain title in your own words. Give one example and one common mistake. Then open the MAGIVOX topic test for this section.

10. Responsive HTML Practices

What to learn

- Viewport
- Picture/source
- Meaningful DOM order

Practice checkpoint

Explain viewport in your own words. Give one example and one common mistake. Then open the MAGIVOX topic test for this section.

11. HTML5 APIs Overview

What to learn

- data-* attributes
- details/summary
- dialog overview

Practice checkpoint

Explain data-* attributes in your own words. Give one example and one common mistake. Then open the MAGIVOX topic test for this section.

12. Project

What to learn

- Build a semantic portfolio page

- Add contact form
- Add projects section
- Validate HTML

Practice checkpoint

Explain build a semantic portfolio page in your own words. Give one example and one common mistake. Then open the MAGIVOX topic test for this section.

13. Interview Preparation

What to learn

- Block vs inline
- id vs class
- semantic HTML
- GET vs POST
- alt attribute
- form label relationship

Practice checkpoint

Explain block vs inline in your own words. Give one example and one common mistake. Then open the MAGIVOX topic test for this section.

Worked Examples

Semantic page

```
<main><section><h1>Projects</h1><article>...</article></section></main>
```

Accessible input

```
<label for="email">Email</label><input id="email" type="email" required>
```

Image

```
<img src="chart.png" alt="Sales increased from January to March">
```

Interview Answer Pattern

Use this structure for technical questions:

- 1. Definition - say what it is in one or two lines.
- 2. Why - explain why it is useful.
- 3. Example - give a small real or code example.
- 4. Difference/common mistake - compare with a related concept when relevant.
- 5. Be truthful - do not claim tools or experience you have not used.

Final Course Checklist

- I can explain the foundation without notes.
- I completed examples by typing/doing them myself.
- I completed topic tests and reviewed wrong answers.
- I completed at least one mini project or practical exercise.
- I can answer common interview questions in simple language.
- I am ready for the MAGIVOX 50-question final exam.
