MAGIVOX AI

Data Entry & Office Accuracy - A to Z

Typing | Excel | Validation | Quality | Security | Job Preparation

How to use this guide
Study one topic, type the example yourself, practise without copying, then take the MAGIVOX topic test. After all modules, take the final course exam.

Learning outcomes

- Data Entry Role
- Typing Accuracy
- Data Formats
- Excel Basics
- Validation
- Cleaning

Table of Contents

1. Data Entry Role
2. Typing Accuracy
3. Data Formats
4. Excel Basics
5. Validation
6. Cleaning
7. Quality Control
8. File Handling
9. Security
10. Timed Assessment
11. Interview Preparation

1. Data Entry Role

What to learn

- Accuracy and speed
- Understanding source documents
- Confidentiality
- Daily workflow

Practice checkpoint

Explain accuracy and speed in your own words. Give one example and one common mistake. Then open the MAGIVOX topic test for this section.

2. Typing Accuracy

What to learn

- Touch-typing posture
- Accuracy before speed
- Common transcription errors
- Number entry

Practice checkpoint

Explain touch-typing posture in your own words. Give one example and one common mistake. Then open the MAGIVOX topic test for this section.

3. Data Formats

What to learn

- Text
- Numbers
- Dates
- Phone numbers
- IDs and leading zeros

Practice checkpoint

Explain text in your own words. Give one example and one common mistake. Then open the MAGIVOX topic test for this section.

4. Excel Basics

What to learn

- Rows/columns/cells
- Tables
- Sort and filter
- Freeze panes

- Find and replace

Practice checkpoint

Explain rows/columns/cells in your own words. Give one example and one common mistake. Then open the MAGIVOX topic test for this section.

5. Validation

What to learn

- Data validation lists
- Duplicate checks
- Required fields
- Range checks

Practice checkpoint

Explain data validation lists in your own words. Give one example and one common mistake. Then open the MAGIVOX topic test for this section.

6. Cleaning

What to learn

- TRIM/CLEAN idea
- Remove duplicates
- Text to Columns
- Standardize case

Practice checkpoint

Explain trim/clean idea in your own words. Give one example and one common mistake. Then open the MAGIVOX topic test for this section.

7. Quality Control

What to learn

- Double-entry check
- Sampling
- Source-to-system comparison
- Error log

Practice checkpoint

Explain double-entry check in your own words. Give one example and one common mistake. Then open the MAGIVOX topic test for this section.

8. File Handling

What to learn

- Naming conventions

- Folders
- Version control basics
- Backup discipline

Practice checkpoint

Explain naming conventions in your own words. Give one example and one common mistake. Then open the MAGIVOX topic test for this section.

9. Security

What to learn

- Do not share sensitive data
- Screen privacy
- Phishing awareness
- Access only what you need

Practice checkpoint

Explain do not share sensitive data in your own words. Give one example and one common mistake. Then open the MAGIVOX topic test for this section.

10. Timed Assessment

What to learn

- Enter a sample table
- Run validation
- Check totals
- Record accuracy

Practice checkpoint

Explain enter a sample table in your own words. Give one example and one common mistake. Then open the MAGIVOX topic test for this section.

11. Interview Preparation

What to learn

- How do you ensure accuracy?
- How do you handle repetitive work?
- What Excel tools do you use?
- How do you protect confidential data?

Practice checkpoint

Explain how do you ensure accuracy? in your own words. Give one example and one common mistake. Then open the MAGIVOX topic test for this section.

Worked Examples

Accuracy check

```
Compare row count, totals and a random sample against the source.
```

Leading zero

```
Store codes like 00125 as text when the zero is meaningful.
```

Validation

```
Use a dropdown for status values to avoid spelling variations.
```

Interview Answer Pattern

Use this structure for technical questions:

- 1. Definition - say what it is in one or two lines.
- 2. Why - explain why it is useful.
- 3. Example - give a small real or code example.
- 4. Difference/common mistake - compare with a related concept when relevant.
- 5. Be truthful - do not claim tools or experience you have not used.

Final Course Checklist

- I can explain the foundation without notes.
- I completed examples by typing/doing them myself.
- I completed topic tests and reviewed wrong answers.
- I completed at least one mini project or practical exercise.
- I can answer common interview questions in simple language.
- I am ready for the MAGIVOX 50-question final exam.
